TITLE

SHUFFLING CIRCUIT

ABSTRACT: PURPOSE: To halve a memory capacity for a shuffling, reduce cost and power consumption.

> CONSTITUTION: By writing the input data from an input terminal 11 into a memory 13 and reading, the output data, which are shuffled, are taken out of a terminal 15. An address generating circuit 20 switches the output address from an address counter 21 and the address which is taken out this address via a shuffling table 22 at every shuffling frame, which is shuffling process unit, by a selector 23 and the memory 13 is accessed. At the memory 13, the input data are written into the same address, from which data are read.
